1

A. Measure and cut required length of hose.
B. Join female and male end fittings.

2

Fold hose to minimize width and slip a ProPEX ring over the end of the hose.

3

Holding ProPEX ring, insert female fitting, pushing & wiggling hose from side to side until hose end is half the width of the ring from the fitting's shoulder.

4

Drive ProPEX ring over fitting by holding pliers against ring at a 90° angle to the fitting and driving on with hammer, or drive on with PEX crimping tool. Allow room for fitting collar to turn.

5

ProPEX ring needs to overlap fitting so that the tapered end of the fitting is visible beyond the ring.

6

Unjoin fittings and repeat steps 2, 3 and 4 for the other end of the hose.

7

Roll up hose and provide to customer with **INSTRUCTION SHEET**.
